

## Welcome to Slow Down® Hay Feeder ~patent pending

When your horse can't be out grazing  
as nature intended...

This is the next best thing!(Click here to see a video demonstration)

Veterinarian recommended.

### SIMPLE

- Smaller portions slows eating
- No mechanical parts
- No assembly required
- Free standing or easily mounted to stall walls, pipe fence, gates or postsSAFE
- No sharp edges
- Durable non-corrosive materials
- Ground level feedingEFFECTIVE
- Veterinarian recommended
- Simulates natural grazing action
- Treats obesity and laminitis
- Eliminates waste and messy stalls
- Saves time and money
- Extends feedings up to five times
- Prevents boredom and cribbing
- Helps treat and prevent ulcers
- Reduces dust/sugars with less mess
- Portable, take it anywhere

Is This Your Horse?

- ü Confined to a stall or dry lot?
- ü Chews fences, cribs, digs or paces?
- ü At risk for sand colic?
- ü Has dust allergies or heaves?
- ü Suffers from laminitis or has foundered?
- ü Overweight or needs conditioning?
- ü Has an ulcer or a metabolic disorder?
- ü A messy eater and wastes hay?

The Slow Down® Hay Feeder Soaker Can Help!

By nature, horses evolved to eat grass, up to 16 hours a day. Confining horses to stalls or dry lots invites health and behavioral issues. Veterinarians agree, free choice hay is one way to prevent these issues. The revolutionary Slow Down® Hay Feeder/Soaker actually simulates the eating habits of a horse on pasture by limiting hay intake. Portions are smaller, thus extending the length of time it takes to finish a quantity of hay. In most cases, up to five times longer! Taking longer to eat keeps horses satisfied and healthier, while saving you time and money!
